SOLAR INFO AMERICA

SOLAR SALES & CUSTOMER SOLUTIONS

COMPANY OVERVIEW & OPERATING REPORT

An adaptable nationwide solar sales organization.

Our model connects customers interested in residential and commercial solar with suitable installation pathways, while prioritizing education, qualification, and a credible customer experience.

2026 EDITION | COMPANY PROFILE

This report describes Solar Info America’s operating approach and offerings. It is not an audited financial report and does not claim specific installation volumes, partner counts, or revenue results.

COMPANY PROFILE

Who we are and how we operate

Solar Info America operates primarily as a solar sales, customer-engagement, and coordination organization. We work with installation companies across U.S. markets, with partner selection determined by each project and market.

Core mission

Help homeowners and organizations make better-informed energy decisions through accessible education, preliminary evaluations, and connection to available provider solutions.

Primary business activities

Customer outreach, lead generation, electric-bill intake, qualification, solar option education, appointment coordination, and supporting the transition to the provider-led installation process.

Who performs installation

Selected installation companies may perform site surveys, engineering, permitting, installation, inspections, interconnection, and contracted service responsibilities. Specific responsibilities must be confirmed in each agreement.

Partner flexibility

Installer relationships may change over time. We do not publish a fixed list of installers in this report; availability and assignments vary by geography, licensing, capacity, pricing, and customer requirements.

BUSINESS MODEL

Solar sales + customer qualification + installation-partner coordination

OFFERINGS

Solutions for multiple customer segments

All pathways begin with assessing customer needs, service availability, and eligibility. Not every solution is offered in every market.

Residential solar

Rooftop solar evaluations for eligible homeowners, including electricity usage review, preliminary options, and installation partner referral.

Commercial solar

Solar feasibility and energy-cost exploration for businesses, property owners, and organizations.

Community solar

Where eligible programs operate, an avenue for customers who may not install rooftop panels to explore utility-bill credits.

Initial energy analysis

A bill-informed, online starting point intended to identify potential opportunities—not a final production guarantee or binding quote.

OTHER WEBSITE CATEGORIES

Solar Info America’s website also references home and business security services. These are adjacent offerings and should be presented separately from the core solar sales business, subject to current provider availability.

OPERATING MODEL

How a prospective project advances

A staged process allows customers and participating providers to evaluate fit before significant installation work begins.

01 Discovery & intake

Customer supplies energy usage, property details, interests, and contact information.

02 Preliminary analysis

Review potential options and constraints; communicate that early figures are estimates.

03 Qualification & coordination

Confirm relevant financing, utility, and provider requirements; coordinate a survey when appropriate.

04 Professional site survey

For most rooftop projects, inspect roof condition, shading, electrical infrastructure, and technical feasibility.

05 Proposal & provider agreement

Selected provider confirms scope, pricing, final design assumptions, cancellations, and responsibilities.

06 Provider-led execution

Installation company manages contracted installation work and required approvals, followed by utility permission to operate where applicable.

GOVERNANCE & NEXT STEPS

How we communicate with customers and partners

Our commitments emphasize transparent roles, realistic expectations, and flexibility across changing markets.

Transparent estimates

Energy and financial estimates are preliminary until confirmed using verified usage, property data, site survey, utility details, current program rules, and provider proposals.

Financing and incentive disclosures

Available financing, eligibility, and incentives depend on the customer, location, lender, provider, and rules in effect at the time. No universal savings or incentive claim is made.

Dynamic installation partners

Installer relationships are not fixed. The appropriate installation provider is selected based on market coverage, qualifications, capacity, and project-specific requirements.

Customer decision points

Customers should review written contracts, cancellation rights, financing documents, project milestones, and applicable warranties before authorizing a project.
